A green job is any job or self-employment that genuinely contributes to a more sustainable world. A green job can be with business, nonprofit organizations, government or education. Small business, self-employment and entrepreneurship is very much a part of the new green economy. Some green jobs require specific 'green' skills or education, such as a solar engineer, an environmental educator, or an organic gardener. Many people are both concerned and motivated about the environment and would love to focus their energies around green work full-time. Not every job or company that calls itself green, actually is genuinely green or sustainable. The subject of research in this paper will be focused on analyzing the effects of the possibility of creating a green jobs in the South-East Region of the Republic of Macedonia. The theoretical part of the paper will give an overview of the basic notions related to green jobs and an explanation of the most common possible reasons for createing a green jobs. The practical part of the paper will focus on conducting research to understand if the population in the South-East Region of the Republic of Macedonia desiare to work on this grean positoins.

Keywords: green jobs, entrepreneurship, environment
